Note Title

12/7/2011

14.78 Ultrasound measures heartbeat
5.0 MHz ultrasound reflects off moving heart
wall with 100 Hz freq shift. What is
speed of heart wall. (Hint: You have two shifts
to consider.)

$$f' = f \left(\frac{1 \pm u_o/v}{1 \mp u_s/v} \right)$$

u_o = speed obs
 v = speed of sound

Observer on heart wall (?!) hears higher freq.
 Echoes it back, shift from being moving source.

Wall hears: $f \left(1 + \frac{u}{v}\right) = f_1$ p. 240
 Echoes same but as a moving source

Man hears: $f_1 \left(1 - \frac{u}{v}\right) = f \frac{\left(1 + \frac{u}{v}\right)}{\left(1 - \frac{u}{v}\right)} = f_2$

$$f_2 - f = 100 \text{ Hz} = f \left(\frac{1 + \frac{u}{v}}{1 - \frac{u}{v}} \right) - f$$

$$= f \left[\frac{1+x}{1-x} - 1 \right]$$

$$x = \frac{u}{v}$$

$$= 100 \text{ Hz}$$

$$f = 5.0 \text{ MHz}$$

Solve for $x = 1 \times 10^{-5}$?

$$\rightarrow u = 15 \frac{\text{cm}}{\text{s}}$$
